: Application of Crypto Security Law

1. This Office recently undertook a study of the Crypto Security Law (F.L. 513, Slat Cong., 25 U.S.C. \$ 795), with particular reference to its application to this Agency and the administrative practices and precedures of the Agency. This measurands: presents a brist analysis of certain portions of the law, together with several recommendations concerning practices of CIA and, to some extent, other agencies and departments. It should be realised, however, that the legal points are not beyond argument. That is intended here is to suggest certain stope which the agency might be well advised to take in order to strengthen the Government's case in the event a prosecution under the Act is brought.

2. The purpose of Section 798, which is included in the Englorage chapter of Title 18, is stated in the title of P.L. 513 as follows:

"To emission further the security of the United States by preventing disclosures of information concerning the cryphographic systems and the communication intelligence activities of the United States."

The substance of the Act, set cut in sub-section (a) of Section 798, is that one commits an offense who knowingly and willingly:

"communicates, furnishes, transmits, or otherwise makes estable to an unauthorized person, or publishes, or uses in any manner prejudicial to the safety or interest of the United States or for the benefit of any foreign government to the detriment of the United States any elegation information -

- (1) concerning the mature, preparation, or use of any code, eigher, or cryptographic system of the United States or any foreign government [hereinefter referred to as CRIPTO];
- (2) comparing the design, construction, use, maintenance, or repair of any device, apparatus, or appliance used or propared or planted for use by the United States or any foreign soverages for cryptographic or communication intelligence purposes foreignizer referred to as CRIFTO devices and CRIFTO devices, respectively/;

Approved For Release 2002/05/08 : CIA-RDP59-00882R000100210030-2

- (3) concerning the communication intelligence activities of the United States or any foreign government Descriptor referred to as COMINT,
- (4) obtained by the processes of communication intelligence from the communications of any foreign government, knowing the same to have been obtained by such processes [hereinafter referred to as COCCET]..."

Then follow several definitions, including:

"The term 'classified information' means information which, at the time of a violation of this section is, for reasons of maticall security, specifically designated by a United States Government Agency for limited or restricted dissemination or distribution;

The terms 'code', 'cipher', and 'cryptographic system' include in their meanings, in addition to their usual meanings, any method of secret writing and any mechanical or electrical device or method used for the purpose of disguising or concealing the contents, significance, or meanings of communications;

The term 'communication intelligence' means all procedures and methods used in the intercoption of communications and the estaining of information from such communications by other than the intended recipients;

The term 'unsuthorized person' means any person who, or agency which, is not authorized to receive information of the categories set forth in sub-section (a) of this section, by the Freeident, or by the head of a department or agency of the United States Government which is expressly designated by the Freeident to engage in communication intelligence activities for the United States."

3. Classified Information.

- (a) Section 798 affords greater protection, in its field, to the United States, with respect to the passing of information to unauthorized persons, then do the other espionage laws (Sections 793 and 794 of Title 18) in that the intest of the accused is not significant. Under Sections 793 and 794 an intention to injure the United States, or reason to believe that the information is to be used to injure the United States or to the advantage of a foreign power, is required. Under Section 798 the accused need only have villfully and knowingly passed classified information to an unauthorized person.
- (b) Section 798 also differs from Sections 793 and 794 in the defimition of the information the passage of which involves an offense;

Approved For Release 2002/05/08: CIA-RDP59-00882R000100210030-2

The latter two concern "information respecting the entional defence" and "information relating to the national defence", as contracted with information which "is, for reasons of national security, specifically designated by a United States Covernment agency for limited or restricted discontinuism or distribution". The former language was held by the Supreme Court of the United States, in Corin v. V.S. 112 U.S. 15, 61 S. Ct. 486, to involve a gasetion of fact, that is, the jury must determine whether the acts of the defendent "are commerced with or related to the entional defence" (61 S. Ct. 466). Thus, in prosecutions under those sections it is measured to preve commercion with the entional defence, a requirement which could be entermassing, if applied to information classified "for reasons of matical security", since in such cases the prosecution would have to saludt the very information (and presumably much more) the discontention of which had been restricted by an agency of the Government "for reasons of matical security".

Although it is not free from doubt, it is believed that under Section 798 it would not be necessary to submit to the jury, or to prove, the question of whether the designation "for reasons of national security" was a correct one; proof that the designation was made and that the agency which made it did so for reasons which the agency regarded as "reasons of national security" should be all that is required. The influention which is particular under Sections 793 and 794 is referred to in those sections by a generic term - information "respecting the national defence" or relating to the matical defense". Information which is the basis of an indictment may or may not fall within the generic term; commone's opinion (the jumy's) must be obtained and accepted. The phrase by which Section 798 refers to the information which is significant therounder covers information with respect to which a particular action has been taken, i.e., informebion which a government against has specifically designated a certain vey for a certain reason. The only question requiring an opinion by the jury is whether such action occurred, not whether It should have occurred. Any combension to the contrary is believed refuted by the fact that its acceptanso would render the statute unsaferceable in many cases, juince security considerations doubtless would preclude the Covernment from introducing interesting information to establish "reasons of national security". Since the plain intent of the statute is to protect the COMINY and CHIPPO meters by establishing offences and posisionests for the violation thereof, an interpretation which would defeat such intent should be avoided.

In any event, if the shove analysis is incorrect, that is, if the jury would be aliened to judge whether the Agency correctly designated information for resease of national security there appears to be nothing to be done shout it emegt to decide, whenever a case is ready to go to trial, whether we are proposed to make available records and information to be introduced as evidence. But in order to take advantage of the statute in the event the shove acalysis is correct, it is believed we would be well advised to designate dominants in the language of the statute. For this purpose, a stamp reading as follows, could be used:

"For reasons of mational security, this document is specifically designated by the Control Intelligence Agency for limited or restricted dissemination or distribution."

Approved For Release 2002/05/08 : CIA-RDP59-00882R000100210030-2

Alternatively, the same repair perhaps could be acknowed by a requiremental state which all COMENT (or CHIPTO) cleared people would read; they would also certify to the same. The requistion, in addition to unking reference to Section 750, would provide that all COMENT (or CHIPTO) decements will bear a maned code word, or one of a series of code words that the dissentination or distribution of any document bearing any of the code words is limited and restricted by the Contral Intelligence Agency for reasons of matical security.

L. MD/P Promision System-

The definitions of the terms "code", "cipher" and "cryptographic systems" (see passegraph 2 above) include "any method of secret writing and any mechanism) or electrical device or method used for the purpose of diagnising or concending the contents, significance or meanings of

mysse. In order to bring theme systems and devices written the sentence it might be well to utilize a regulation along the lines of that mentioned in paragraph 3(b) above.

5. Breetherland Person.

A problem size arises with respect to the definition of "unsuthorized person", mannly a person or agency not authorized by the President or by the head of an agency designated by the President to engage in communication intelligence activities to receive CKIPTO or CONTET information. By directive, a number of agencies have been designated as the only agencies sutherized to engage in CENTET activities. Other agencies of the Covernment, however (for manuals, those represented on the USCHD), utilize telecommunications. To the extent, if any, that the activities of any of those agencies require the receipt of information involving CKIPTO or CONTET or CMIPTO or CONTET devices it would appear necessary for the President, or the head of one of the agencies which is authorized to angage in CENTET activities, to authorize that agency and its ampleyance to receive such information.
